Care Instructions

Epipremnum Scindapsus Trebi

Epipremnum Trebi or Scindapsus pictus Trebi is a trailing or climbing plant boasting a rich green leaf with silvery, lighter green patterning.

A great next step for lovers of Golden Pothos, this plant requires similar care conditions. Trebi can be grown as a trailer flowing from a shelf or bookcase, or can be given something to climb such as a trellis or moss pole.

Light: Enjoys a lightly humid environment but can tolerate cooler conditions. Bright indirect light. Avoid direct sunlight as may cause browning of leaves.

Water: Allow soil to dry out before watering. Ensure good drainage and do not let pot sit in water.

Maintenance. Ready potted in premium soil, no need to repot for 12-24 months. Fertilise with our GT Foliage Focus or PlantRunner Liquid Plant Food monthly during spring/ summer.

*May cause irritation if ingested. Keep out of reach from children and pets.
