Care Instructions Philodendron Gloriosum

Philodendron Gloriosum is a botanical masterpiece that demands attention. With its lush leaves and striking white veins, it is a true embodiment of elegance.

Keep it bathed in bright indirect light, water it when the soil is dry, and provide a humid environment to watch it thrive into a botanical sensation. Let the Gloriosum grace your space and elevate your plant collection to new heights of glory.

Light: Enjoys bright, indirect light. They will, however, tolerate lower light spaces, but keep out of direct sunlight as this will cause the foliage to burn.

Water: Water when the top layer of soil is dry. Ensure to not overwater as the roots do not like to sit in water. Less water will be required over the winter months.

Maintenance. Ready potted in our Foliage Studio premium potting soil, no need to repot for 12-24 months. Fertilise monthly in the warmer months with our Growth Technology Foliage Focus plant food. During the cooler months, fertilise every other month with half-strength formula.

*toxic if consumed in copious amounts. Keep out of reach from small children and pets.
