Care Instructions **Alocasia Portodora**

This hybrid variety is enormous when grown in ideal conditions indoors or out. Alocasia Portodora, also known as the Elephant Ear plant, is beloved for its majestic, wavy-edged leaves that add a tropical flair to any space. With proper care, this stunning plant can thrive indoors or outdoors, even through its dormancy in cooler months. They are a real feature plant in a bright room.

Light: Indoors - Bright, indirect light is essential. Place your Alocasia Portodora near an east or west-facing window for the best results. Avoid direct sunlight, which can burn its leaves. Thrives in high humidity.

Outdoors - Grows best in partial shade or filtered sunlight. Ensure it is protected from harsh midday sun.

Water: Keep soil moist but not soggy, do not allow plant to sit in water. Tip: Allow the top layer of soil to dry out between watering.

Maintenance: Ready potted in our premium soil, so no need to repot for the next 12-24 months. Fertilise with our GrowthTechnology Foliage Focus Plant Food every 6 weeks during spring/ summer. Stop feeding in the colder months to prevent root stress. In cooler months, Alocasia enters dormancy, especially in areas with lower light or temperatures

Toxic: Keep out of reach from pets and children.
